

Q6)

1:True.

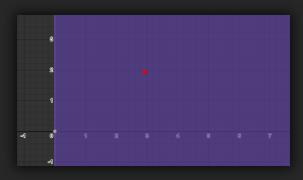

2:False.

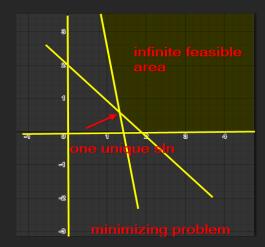

3:True.

4:False.

All of them are so obvious, but for short explanation:

1 ) if we can name one single point (that is our feasible area ) a "Corner Point" The answer is Yes.if not vice versa

3 we can't have a unbounded optimal sln without infinite area 4 it can be a redundant constrain with no effect.
